SCANNERS &  
OTHER PRIZES!**

Let me match you with the best products for your specific needs and budget. RACO carries printers, scanners, data collection devices, software & supplies. Offer ends December 31, 2013.

## Bar Code Labels

**We have been producing bar code labels for libraries across North America since 1999.**

Laminated Teslin bar code labels are our premium library label and our most popular seller. Using Teslin as a mid-ply creates a virtually indestructible label. Pair that with an aggressive, acid-free permanent adhesive, and you have a label that will last longer than the item itself. The labels will not become brittle or yellow with age and will not react to your printed material. We also provide you with the option of receiving an emailed PDF proof prior to production that you can print on your local printer and then scan and test with your library automation system. This provides you with the peace of mind to be certain the bar code is going to work with your system.

Pairs Bar Code Label Set  
M001S2 or G001S2

2-Part Bar Code Label Set  
M002S1 or G002S1

Single Bar Code Label  
M001S1 or G001S1

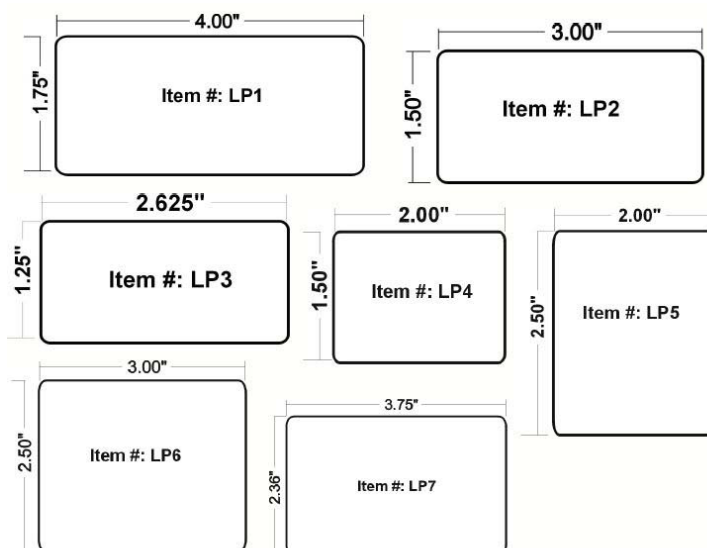

- Available in Singles, Pairs, 2-part and Smart
- Digitally processed
- Synthetic Teslin mid-ply
- Matte or gloss overlamine for extra protection
- All symbologies supported, including Codabar, Code 3 of 9 and Follett
- Color stripes or full color labels also available
- Standard check digits available at no extra cost
- 100% guaranteed to work with your system
- Non laminated thermal labels on rolls also available

## Label Protectors

### Protect Your Labels For The Life Of The Item

We supply various sizes of label protectors. All protectors are a 2.0 mil thickness, gloss polypropylene material with an aggressive permanent acrylic adhesive that will not become brittle. Labels are acid-free and UV resistant so they will not react to your printed material or yellow with age. All protectors come on rolls of 1000. If you don't see your required size, please ask us.

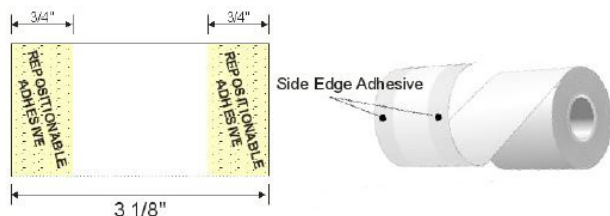

**Did you know that RACO sells more than labels?  
We carry barcode printing and data collection  
products along with service and professional  
services to get your project on the right track.**

## Quick Stick, Hold Spine Wraps

**Speed up the process for creating patron hold and interlibrary loan slips. Avoid the hassle of elastic bands and the mess of tape!**

These Quick Stick spine wraps will immediately speed up and simplify the process of creating and affixing your hold and interlibrary loan slips. No more using elastic bands or tape and no more slips falling off the books or items. Simply print these thermal rolls on a compatible direct thermal printer, tear the slip off and apply to the spine of the book with the side-edge adhesive strips. The slips wrap neatly and easily around the item and will stay in place as long as you need them. The special repositionable adhesive is similar to a Post-It Note™ and allows the slip to be removed and re-affixed quickly and easily without damaging the surface or leaving a messy residue.

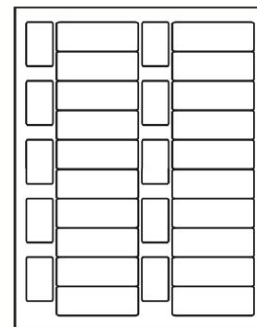

### Quick Stick, Spine Wrap roll features include:

- Liner-free construction
- Special repositionable, side edge adhesive
- Can be printed to any length required
- Will work in many direct thermal receipt printers

## Spine Labels

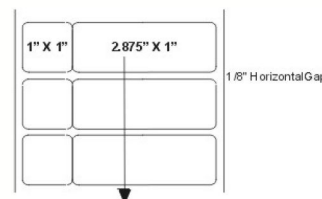

**Our premium quality spine labels are available in a number of formats for use with various library automation systems.**

- 8.5" x 11.0" 'lay-flat' sheets
- Acid-free, pressure sensitive, permanent adhesive
- Flexible liner for smooth feeding
- For use in laser and inkjet printers
- Sides are stripped of 1/16" of label portion - meaning the sheets will not ooze adhesive into printers
- Other label sizes available

**As an alternative to sheets, we also offer spine labels on rolls that can be printed on desktop thermal printers. They provide jam free operation, allowing you to print your own spine and circulation labels on demand. A great option to replace torn or worn existing labels on your collection.**

- Premium quality acid-free, 3 mil synthetic polypropylene label stock
- Synthetic material is thin (3 mil) but highly durable and tear-resistant
- The thin label design easily conforms to contours on the spine

## AV Media Supplies

### A Variety of Audio Visual Supplies at Great Prices

We provide libraries with quality bar code labels designed specifically for your CD/DVD collection. They are thinner and lighter than our Teslin item labels and won't upset the balance of the disc while it is spinning. They are also available with a 3M VOID, tamper-evident material to help reduce theft and prevent disc switching. If these labels are removed by a patron, the word 'VOID' will be left on the item and on the label itself.

- Available in Singles, Pairs, Two-Part and CD/DVD Sets
- Aggressive acid-free permanent adhesive
- Thermal transfer labels printed with a resin ribbon - the image cannot be scratched off
- All sizes available with void material
- Provided on rolls

### Allsop Strong Boxes

Replace your jewel cases for the last time! Allsop's StrongBox is shatter resistant. They guarantee it. You can literally bend this case in half and it won't break. It is still the same size as any other jewel case but this one is permanent. It has locking hinges (that won't break) and a quick-release locking hub (that won't break either). Available for single and double CD/DVDs.

## EM Security Strips

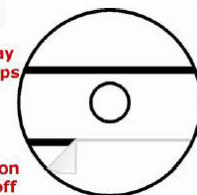

### 100% Guaranteed to Work or Return For Refund

Reduce theft of your collection with our electromagnetic security strips. Made with archival quality adhesives that are water based and non-acidic, our strips will provide years of protection without damaging your items.

**ITEM #: EMDDD**
